

# Visitor Registration - Contactless

## Uses visitor's own mobile

Maintain social distance of visitors at Factory main gates using Palas Contactless Visitor Registration (PCVR) software.

### Visitors use their own mobile to make an entry pass. No extra hardware to be purchased

Just 4 simple steps:

How it works:

- Employee logs into PCVR from their internet connected computer or mobile and enters details of expected visitor - Mobile, Name
- Visitor gets message on their mobile that their appointment is confirmed with a web link to PCVR
- On arrival at entry gate, visitors, on their own mobile, go to the web link, their mobile number is verified with OTP. Then, on their phone, they get a form with their name and that of the employee pre-filled; next they take their photo (selfie) using their own mobile, then enter details of any special products they are carrying (eg laptop).
- On completion, visitor gate pass is printed at Entry Gate for self-collection. For this printing, any PC with printer can be used, that is lying surplus with the organization being visited and can be kept near the entry gate, typically with the guard
- Instead of the current practice of re-usable ID cards / lanyards which can be contaminated, A4 paper printed gate pass is suggested as large size fonts make it easy to read at 6 feet distance; the paper can be destroyed at time of departure at exit gate, to avoid return contamination
- Visitors can also book an appointment with employee by sending request on PCVR link; once appointment is approved, on appointment date and time they can generate their gate pass themselves as above
- Effectively out-sources entry pass making to visitors. Saves manpower, and helps maintain social distance

Subscription based, only Rs 750 per month, GST extra.

Price per entry point, payable annually in advance. At each entry point, only one customer PC/printer (with customer guard) can be connected to each subscription. Up to 5000 sms included for appointment registration. Additional 5000 sms packages available for Rs 2000

Palas, an MSME, also manufactures, in India, Touchscreen Self-Service Kiosk hardware.

- These reduce people-to-people contact, maintaining social distance, avoiding handing over of paper or registers from one person directly to another
- Are easily disinfected unlike paper registers or conventional computers and keyboards. Palas Touchscreens, all smooth metal & glass, are easily sanitized/disinfected using alcohol based wipes or sprays many times a day.
